

Making business from nutrient cycle

Presentations

Katja Viitikko, UPM & Raimo Kauppila, Yara:

Benefits and challenges in recycling business

Video (in Finnish):

Nutrients and energy from biogas

Mikko Rahtola, Luke:

Funding opportunities for nutrient recycling

Hanna Mattila, Sitra:

What is Sitra doing to promote sustainable food system?

Jukka Rintala, TUT:

Recycling nutrients in urban environments

Workshop: Four most interesting materials for further development

Yellow gold (human urine)

- Techniques are ready, next step is to pilot and do in larger scale as well as create positive image and develop the legislation for end-products

Brown Gold's Land (slurry/animal manure)

- Find and develop added value side-products, not only nutrients, learn from forest industry

Bio-coin (biowaste)

- Involve producer responsibility: consumers take their bio-waste to certain stations (shops) and get coins from them by which they can buy again

Shit happens (sewage sludge)

- Get acceptance for the use as a fertiliser (how?), private actors involvement
